

Petfolio

Cross-Platform Pet Care App

Problem

- Pet info is scattered across notes, texts, or memory
- Caregivers risk missing feedings, medications, or details
- Lost pets lack fast awareness + coordination

Solution

Petfolio centralizes pet care:

- **Profiles** with diet, meds, weight, photo
- **Reminders** via local notifications
- **Sharing** profiles via link/QR
- **Lost & Found** alerts with posters
- **Weight tracking** and trainer directory

Epic Requirement

As a pet owner,

I want to manage my pet's information and care needs in one app,
so that I can keep everything organized and share it with others.

Sprint 1 (MVP)

- **Auth:** Email/password login (Firebase)
- **Pet Profiles:** CRUD + photo upload
- **Care Plan:** Diet, feeding, medications
- **Notifications:** Feeding/med reminders
- **Sharing:** Read-only link/QR

Sprint 2 (Expansion)

- **Lost & Found mode:** Mark pet lost, capture last seen, poster
- **Directory:** Trainers/agencies (static)
- **Weight Tracking:** Log entries + chart
- **UI Polish:** Accessibility + theming
- **Stretch:** Push lost alerts, sitter roles, offline cache

Development Timeline

Sprint 1 (Weeks 1–5): Core MVP

Sprint 2 (Weeks 6–10): Expansion + polish

End goal:

A secure, shareable pet care hub with reminders, lost-and-found, and trusted connections.
